Outline

Exercise 16.3

17) A and B are events such that $P(A) = 0.42$, $P(B) = 0.48$ and P(A and B) $= 0.16$. Determine

(i) P(not A)
(ii) P(not B)
(iii) P(A or B)

Solution

There are two discrete groups A,B.let Y be discrete random variable such that

$$Y = \begin{cases} 1, & \text{if A is chosen} \\ 2, & \text{if B is chosen} \end{cases}$$

(i) Determine p(not A)

i) Given $P(A) = 0.42$ so we have $P(X = 1) = 0.42$

$$\begin{aligned} P(A^{\complement}) &= 1 - P(X = 1) \\ &= 1 - 0.42 \\ &= 0.58 \end{aligned}$$

$$\therefore P(not\ A) = 0.58 \qquad (1)$$

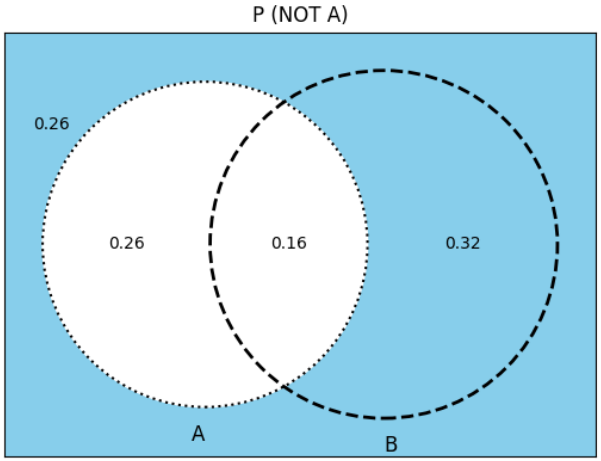

Figure: P(not A)

(ii) Determine p(not B)

Given $P(B) = 0.48$ so we have
$P(X = 2) = 0.48$

$$\begin{aligned} P(B^{\complement}) &= 1 - P(X = 2) \\ &= 1 - 0.48 \\ &= 0.52 \end{aligned}$$

$$\therefore P(not\ B) = 0.52 \qquad (2)$$

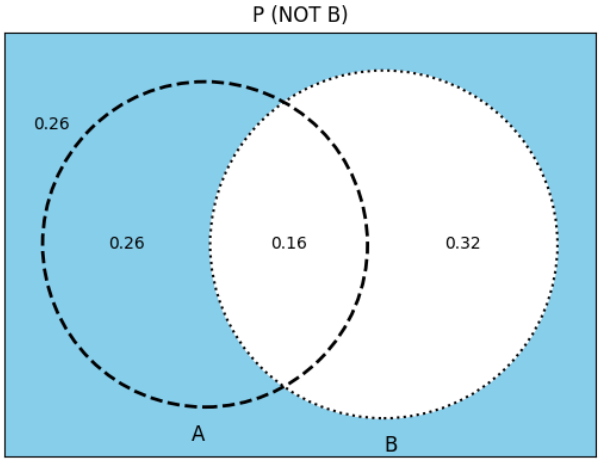

Figure: P(not B)

(iii) Determine p(A or B)

Given $P(A \cap B) = 0.16$,
$P(A) = 0.42$ $P(B) = 0.48$ so we have
$P\left(\bigcap_{i=1}^{2}(X = i)\right) = 0.16$

$$P\left(\bigcup_{i=1}^{2}(X = i)\right) = P(X = 1) + P(X = 2) - P\left(\bigcap_{i=1}^{2}(X = i)\right)$$
$$= 0.42 + 0.48 - 0.16$$
$$= 0.74$$

$$\therefore P(A \text{ or } B) = 0.74 \quad (3)$$

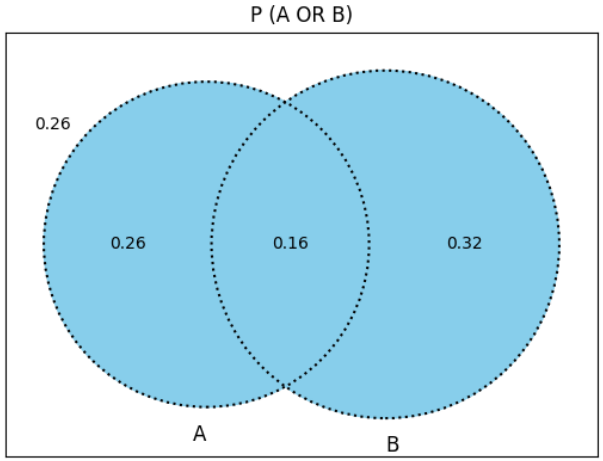

Figure: $P(A \cup B)$

Verification

Verification

```
Enter the value of P(A) =0.42
Enter the value of P(B) =0.48
Enter the value of p(A and B) =0.16
P(NOT A) = 0.58
P(NOT B) = 0.52
P(A OR B) = 0.74
```
